

## Compaction Systems Brochure

# 10 cubic metre PTU Portable

Ace Compaction Systems strive to offer their customer an efficient and more economical way of containing and recycling their waste and have some exciting, new and innovative systems available on the market.

Because of the ever increasing cost of waste now being forced upon both the commercial and domestic industry in Ireland, Ace Compaction Systems have looked at various ways of making it easier and more viable for Waste Contractors, Co. Councils, Commercial customers and of course the domestic customer to re-cycle and segregate their waste using the one system.

10 cubic metre PTU Portable

The PTU Portable is manufactured with safety in mind and once the customer disposes of their waste the flashing beacon will illuminate and an audio alarm will signal before the drum door slowly closes. This in turn automatically disposes of the waste into the compactor charge box, which is then compacted into the container.

All the operator has to do is to put the token into the slot or swipe the FOB in front of the reader system. This allows for the disposal of his/her waste into the area shown in the photo. All that is left for you to do is to walk away, The machine takes care of the rest.
